

NGUYỄN PHÚC NGUYÊN

GAME DEVELOPER INTERN

ABOUT ME

Full name: Nguyễn Phúc Nguyên
Birthday: 11/09/2004
Birthplace: Đà Lạt - Lâm Đồng
Gender: Male
I am a fourth year undergraduate, major in Electrical and Electronic Engineering. I am always eager to explore, learn and love problem solving.

HOBBIES

Gaming
Creativity
Books
Team Work
Chess

CONTACTS

51/6 5th Street, Linh Trung Ward, Thủ Đức City

EDUCATION

- University of Technology and Education | 9/2022 - Now
  4th year of Undergraduate Electrical and Electronic Engineering
- TOEIC 960 (5/2025)
- IELTS Certificate 7.0 (11/2021)

INTERNSHIP OBJECTIVE

As someone deeply passionate about programming and crafting games, I'm keen to not only leverage my current programming skills but also to immerse in environments where I can learn from seasoned professionals, gaining valuable experience working within diverse teams and managing extensive game codebase

EXPERIENCES

- **3D VAMPIRE SURVIVORS WITH PROCEDURAL MAP GENERATION (5/2025 - 8/2026)**
  Engineered a multithreaded rogue-lite handling 2,000+ simultaneous enemies via the C# Job System and a chunk-based procedural terrain system with dynamic LODs and a centralized object manager.

- **SNOWY BRAWL: UNITY MULTIPLAYER 2D - PHYSICS BASED - ON GOOGLE PLAY (4/2023 - 3/2026)**
  Research on Networking for Unity, following the server-client model. Apply client prediction methods to synchronize between server and client. Apply design patterns to optimize for mobile such as Object Pooling, Flyweight,... Hence learning how to write code that is easy to maintain, expand and using git, github to manage version control.

- **CLASSIC GAME MECHANICS RECREATIONS (2/2023 - 4/2023)**
  Use reverse engineering to learn algorithms and techs behind different classic games. Furthermore, learning how to design fun and engaging games by understanding user psychology.

- **UNIVERSITY SCIENTIFIC RESEARCH: SOLAR POWER LIGHTING SYSTEM (11/2024 - NOW)**
  Team work, project vision, program microcontrollers such as PIC, Arduino, ESP32. Combining light sensor, battery capacity indicator, LoRa transmitting within 10km radius, read and write data using Firebase.
